

ODOR-ARMOR OBM[®]

ODOR-ARMOR[®] OBM CONCENTRATE FOR DRILLING FLUID ODOR MANAGEMENT

ODOR-ARMOR[®] OBM is a highly concentrated, multi-component, blend of odor neutralizing compounds for use in invert drilling fluid odor management applications. The natural plant extracts work to counteract nuisance odors including organosulfur compounds like mercaptans and dimethyl sulfide. Unlike masking agents that add to the overall odor intensity by introducing an odor stronger than the offending odor, ODOR-ARMOR[®] OBM uses natural odor neutralizing technology that significantly reduces odors on contact. Results are immediate and long lasting. Independent studies show odor reduction of 90-95% with proper use.

Application:

ODOR-ARMOR[®] OBM is used in drilling fluid odor management applications in its pure form without dilution at v/v ratios of 5000 – 20,000:1. Application rates and frequency may vary with each drilling location and type of fluid used. Consult a Benzaco Scientific Manufacturer's Representative to review application protocol and dosage rates to maximize treatment performance.
